Hi Fellow Tester,

Updates on Version 2 of the site

=====

Below are the updated links

- [Integration Test Cases](#)
- [Unit Test Cases](#)
- [Bug Tracker](#)

Refer the Changelog to determine the changes made in the test cases as per the SRS v2.

=====

Updates on Version 3 of the site

=====

The development team has informed that version 3 will be available in next 2 days

This release will feature

- All modules for the Manager Role
- All modules for the Customer Role

Ideally, you need to create and execute module test cases for

**Manager Role:**

1. Change Password
2. Deposit

3. Withdrawal
4. Fund Transfer

**Customer Role:**

1. Balance enquiry
2. Fund Transfer
3. Mini Statement
4. Customized Statement
5. Change Password

You also need to perform integration testing for all modules.

This requires a mammoth effort and is typically performed by a minimum team of 5 members.

For our self- learning purposes, we will ignore this step.

Moving on to the next phase create a System test plan. If you are new to System testing, refer this [tutorial](#)

**Assignment for the day**

1. Create a System Test Plan
2. Refer the [SRS\\_v3](#). The client now wants a Webservice created. Create test cases to check this webservice.

Cheers  
Team Guru99

**Pro Tip:**

- 1) If you check Defect # 10 in the Bug Tracker. Its status is deferred. This happens frequently during the life cycle of testing project wherein low priority & severity bugs which are taking too much time to resolve are deferred and fixed in the next phase of the project. Such bugs are also called "known issues"
- 2) Any big change request (like the webservice request above) changes the scope of the project and budget needs to be re-negotiated. Albeit, this task is best left to your Business Development Executives and Test Managers
